The CDNA sequence is derived from clone NNDA24. The NNDAR subunits contribute to the formation of NNDA-activated cation-selective in channels. In addition to being useful for the production of NNDA receptor subunit proteins, the nucleic acids are also useful as probes to identify and isolate nucleic acids encoding related receptor subunits. The receptor subunit proteins of one type (homomeric) or from combinations of subunit proteins of one type (homomeric). The present invention also comprises methods for using such receptor subunits to identify and agonists, antagonists and modulators of glutamate receptor function. The invention also comprises methods for determining whether unknown

This is an ionotropic glutamate receptor which contains cation-specific ligand-gated ion channels. The protein and its coding sequence can be used in disease diagnosis and in research to identify other, similar proteins. They can also be used as probes, for example in genetic screening, and in drug screening, as well as enabling the production of animal disease models.

cc nucleic acids are useful for the production of MMDAR subunits. The proteins (ABB5503-ABB5630, AAM47961), as probes and to identify and close the proteins (ABB5503-ABB5630, AAM47961), as probes and to identify and close the proteins (ABB5503-ABB5630, AAM47961), as probes and to identify and close to consider the proteins of the construction can be carried out using the nucleotide sequences as probes to consider the proteins of the construction can be considered to glutamate receptor systemation can be screened to determine if they are also predisposed to such disease states. Construction can be screened to determine if they are also predisposed to such disease states. Construction comprising (I) are useful for producing selected AMDAR construction subunits and in specific combinations, as well as antibodies to the receptor subunits substantially free of contamination from many other receptor proteins whose presence can interfere with analysis of a single observation of the effect of a drug substance on a particular receptor subtype or combination of MMAR subtypes allows the subtype or combination of MMAR subt
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          subunit, useful for expressing the subunit and as probes in genetic screening techniques, to identify patients having neuropathological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to nucleic acids (I, AAI99167-AAI99196, ABA05910)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 3; Column 257-264; 206pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   encoding human N-methyl D-aspartate receptor
                                                           of drugs or modulators in a test system that human NMDAR subtype or the combination of NMT

Example 3; Column 265-272; 206pp; English.

The invention relates to nucleic acids (I, AA199167-AA199196, ABA05910) encoding human N-methyl D-aspartate receptor (NMDAR) subunits. The nucleic acids are useful for the production of NMDA receptor subunit isolate nucleic acids encoding related receptor subunits. Genetic screening can be carried out using the nucleotide sequences as probes to endogenous glutamate receptors. Also, patients having a family history of the determine if any abnormalities exist with respect to any of the disease states related to glutamate receptor dysfunction can be screened Expression vectors comprising (I), receptor subunits encoded by (I) and subunits and in specific combinations, as well as antibodies to the

The availability of desired receptor subtypes allows the observation of the effect of a drug substance on a particular receptor subtype or combination of NMDAR subunits and to perform initial in vitro humans, a human NMDAR subtype or the combination of NMDAR subtype or the system that is specific for Sequence 1081 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ₽
       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, and polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or

The present invention relates to toluene degrading enzyme genes and proteins tutH (see AAP23629 and AAB59831), tutI (AAF23630 and AAB59832), tutI (AAF23631 and AAB59832), tutI (AAF23631 and AAB59833) and tutI (AAF23632 and AAB59834). The toluene degrading enzymes are homologues of pyruvate formate lyase. The toluene degrading enzymes are useful for biological treatment of organic compounds and in particular for the degradation of toluene and its enalogs contained in liquid or solid waste source. The present sequence is a protein sequence encoded by toluene degrading enzyme gene, TutD/E.	Disclosure; Fig 12; 122pp; English.	Composition comprising toluene degrading enzyme useful for biological treatment of organic compounds, especially for degrading toluene or its analogs	WPI; 2001-041080/05. N-PSDB; AAF23627.          The present invention relates to toluene degrading enzyme genes and proteins tuth (see AAF23629 and AAB59831), tuti (AAF23630 and AAB59832), tuti (AAF23631 and AAB59832), and tutie (AAF23632 and AAB59834). The toluene degrading enzymes are homologues of pyruvate formate lyase. The compounds and in particular for the degradation of toluene and its analogs contained in liquid or solid waste source. The present sequence analogs to the contained in liquid or solid waste source. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                The present invention relates to toluene degrading enzyme genes and proteins tutH (see AAF23629 and AAB59831), tutI (AAF23630 and AAB59832), tutF (AAF23631 and AAB59832) and tutF (AAF23631 and AAB59834). The toluene degrading enzymes are homologues of pyruvate formate lyase. The toluene degrading enzymes are useful for biological treatment of organic compounds and in particular for the degradation of toluene and its analogs contained in liquid or solid waste source. The present sequence analogs contained in sequence degrading enzyme gene, TutD/E.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polyperase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC are to restore normal activity of (II) is useful in gene therapy techniques CC (II), (II) is useful for generating antibodies against it, detecting or CC a food supplement. (II) and its binding partners are useful in medical CC disorders involving abarrant protein expression or biological activity. CC disorders involving abarrant protein expression or biological activity. CC dispositics, forensics, gene mapping, identification of mutations in CC responsible for genetic disorders or other traits to assess biodiversity amino acid sequences. ABG00010-ABG30377 represent novel human CC Note: The sequence data for this patent did not appear in the printed after the sequence data for this patent did not appear in the printed after the sequence data for this patent did not appear in the printed after the sequence data for this patent did not appear in the printed after the sequence data for this patent did not appear in the printed after the sequence data for this patent did not appear in the printed after the sequence data for this patent did not appear in the printed after the sequence of the invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                       Score

                                                                                                                                                                                                                                                                                        Web: www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the 1sogenic strain y2; on bw sp, the same strain used for the BDGP's and box to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be coation/Oualifiers

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Cancer Genetics at the Roswell Park Cancer Tstitute in Buffalo, ECORI digestion of Drosophila DNA provided by partial isogenic strain y2; cn bw sp. the same strain used for the BDGP's and how to order individual BAC clones, the entire library filters for hybridization from the BACPAC Resource Center can be Location/Onal ifface.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       625
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Web: www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila nelanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial Econi digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp. the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               xhoI; This library, constructed by John Davies and Jeffrey McDermott, combines cDNAs from CC-1690 cells grown to mid-log phase in TAP (acetate-containing) medium in the light. TAP medium in the dark, HS (minimal) medium in the ambient levels of CO2 and HS medium bubbled with 5% CO2. Synthesized. The cDNA was directionally cloned into lambda Synthesized. The cDNA was directionally cloned into lambda DBI (Stratagene) in the ECORI (5') and XhoI (3') sites. PaP clones by superinfection with ExAssist (Stratagene) and Short (3') stratagene) in Bonaldo et al (1996) Genome Research 6: 791-806.*

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
